Summary

Backend Developer with experience building scalable backend systems and REST APIs using Node.js, Express.js, PostgreSQL, Prisma, and Docker. Strong foundation in Data Structures & Algorithms with 550+ problems solved and a top university rank. Passionate about designing efficient, maintainable, and high-performance backend architectures.

Education

Bachelor of Technology in Information Technology

Bhagwan Mahavir University, Surat

2023 – 2027

CGPA: 7.84 / 10

Skills

Languages: C, C++, JavaScript, TypeScript

Backend: Node.js, Express.js, REST APIs, JWT, Swagger/OpenAPI

Database: PostgreSQL, MySQL, Prisma ORM, Redis

Frontend: React.js, Next.js

Tools: Git, GitHub, Docker, Postman

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

Backend Developer Intern

Vailora Technolab

Feb 2026 – Jul 2026

- Developed 40+ REST APIs across Authentication, Employee, Task Management, and Daily Reporting modules using Node.js, Express.js, PostgreSQL, and Prisma ORM, enabling scalable backend services for a multi-tenant HRMS platform.
- Designed and implemented secure authentication and authorization workflows using JWT, bcrypt, and role-based access control (RBAC), ensuring secure access management across multiple user roles.
- Optimized backend performance by refactoring complex Prisma queries, improving database interactions, and implementing efficient indexing strategies to reduce API response time.
- Architected reusable service layers and modular backend components following layered architecture principles, improving code maintainability, scalability, and ease of feature development.
- Diagnosed and resolved 20+ production issues by performing root cause analysis, debugging backend services, and validating database operations, improving application stability across releases.

Projects

SnippetVault | Node.js, Express.js, PostgreSQL, Prisma, React, Docker

Live | Frontend | Backend

- Built a full-stack code snippet management platform enabling users to create, organize, search, and securely share code snippets with syntax highlighting and collections.
- Architected a modular REST API using Node.js, Express.js, PostgreSQL, and Prisma ORM with layered architecture, JWT authentication, request validation, and Swagger documentation.
- Developed a responsive React frontend with debounced search, client-side caching, and optimized state management to deliver a fast and seamless user experience.
- Containerized the application using Docker and deployed it on Vercel, enabling consistent development, deployment, and scalable application delivery.

Social Recommendation Engine | C++, Graphs, DSA

- Built a graph-based recommendation engine using adjacency lists to model user relationships and content interactions efficiently.
- Implemented collaborative filtering, popularity-based ranking, and BFS traversal algorithms to generate personalized recommendations with $O(V+E)$ time complexity.

Achievements

- Solved 550+ Data Structures & Algorithms problems across LeetCode, GeeksforGeeks, and CodeStudio, securing Rank 1 on GeeksforGeeks at the university level.
- Built and deployed 2+ production-quality backend and full-stack applications, and developed production features during a 6-month Backend Developer Internship, contributing to scalable REST APIs and enterprise backend systems.
