SKILLS

LANGUAGES

C • C++ • JavaScript

BACKEND

Node.js • Express.js • REST APIs • JWT

DATABASE

PostgreSQL • MySQL • Prisma ORM

TOOLS

Git • GitHub • Docker • Postman
• Swagger/OpenAPI

CORE CS

DSA • OOP • DBMS • OS • CN

EDUCATION

BHAGWAN MAHAVIR UNIVERSITY

B.TECH IN INFORMATION
TECHNOLOGY

2023 -- 2027 | Surat, India
SGPA: 8.0 / 10

COURSEWORK

Data Structures & Algorithms
Object-Oriented Programming
Database Management Systems

ACHIEVEMENTS

- Shipped production compliance systems handling complex edge cases—solving paisa-level tax rounding drift and building exponential backoff for **third-party API** resilience.
- **Rank 1** at university level on GeeksforGeeks; solved **550+** DSA problems across LeetCode, GFG, and CodeStudio.

INTERESTS

Listening to Music • Watching Documentaries • Driving • Fitness

SUMMARY

Backend Developer with production experience building **financial and compliance systems** using Node.js and TypeScript. Skilled in resilient architectures—**DB-backed outbox patterns**, **AES-256 encryption**, and **tax-accurate billing engines**. Strong algorithmic rigor with **Rank 1** at university level.

EXPERIENCE

VAILORA TECHNOLOGAB | BACKEND DEVELOPER INTERN

Feb 2026 -- Jul 2026

Tech Stack: TypeScript, React, Node.js, Express, PostgreSQL, Prisma

- Engineered **E-Invoice & E-Way Bill** integration via an **Anti-Corruption Layer** decoupling logic from the Masters India GSP API, with a **DB-backed outbox pattern** (exponential backoff: 30s → 6h) for resilient async generation.
- Designed a **tax-inclusive billing engine** back-calculating GST base from menu prices with **component-level rounding drift correction** across CGST/SGST/CESS for zero-discrepancy totals.
- Implemented **AES-256-GCM encryption** with versioned envelope format for at-rest credential storage; built a **recursive utility** to mask sensitive fields across all logs and audit trails.
- Architected **server-side 3-tier price resolution** (variant → outlet → base) for menu modifiers, eliminating **client-side price manipulation** vulnerabilities.
- Developed and unit-tested a **pure weighted average cost function** that automatically syncs raw material pricing on inbound receipts, strictly handling complex edge cases like zero-on-hand and float precision drift.
- Built a **configurable discount policy** and centralized bill formatting system—enforcing conditional API/UI validation for customer details per outlet, while unifying thermal and browser print surfaces into a **single source of truth**.

PROJECTS

SNIPPETVAULT | FULL-STACK CODE SNIPPET MANAGER

Node.js, Express.js, PostgreSQL, Prisma, React, Docker

Live | [Frontend](#) | [Backend](#)

- Built a **platform** to create, organize, search, and share code snippets with **syntax highlighting** and collections.
- Architected a **modular REST API** with layered architecture, **JWT auth**, request validation, and **Swagger docs**.
- Developed a **responsive React** frontend with **debounced search**, client-side caching, and optimized state management.
- Containerized with **Docker** and deployed on **Vercel** for consistent development and scalable delivery.

SOCIAL RECOMMENDATION ENGINE | GRAPH-BASED RECOMMENDATION SYSTEM

C++, Graphs, DSA

GitHub

- Built a **graph-based** recommendation engine using **adjacency lists** to model user relationships and content interactions.
- Implemented **collaborative filtering**, popularity-based ranking, and **BFS traversal** for personalized recommendations in **O(V+E)** time.
